

ओ३म्

A vaccine is a biological preparation that provides active acquired immunity to a particular infectious disease. Vaccine is an invaluable gift of medical science to mankind that has prevented millions of illnesses and deaths worldwide. Undoubtedly, immunization is one of the best health investments money can buy. As vaccines are a blessing in the face of critical fatal-disease outbreaks, they underpin global health security and are a vital tool in the battle against antimicrobial resistance. This calendar would make us aware about various vaccines that have been a boon to humankind.

Wash your hands often.

CORONA VIRUS

Coronavirus (Covid-19) is a contagious disease caused by severe acute respiratory syndrome coronavirus2 (SARS-CoV-2).

The first COVID-19 vaccine was granted regulatory approval on 2nd Dec., 2020 by UK Medicines regulator MHRA. It was evaluated for emergency use authorization status by the US FDA and in several other countries.

So far nine vaccines have been authorized by atleast one national regulatory authority for public use.

In India two vaccines have been given emergency approval for India's immunisation programme – the Oxford/ AstraZeneca vaccine, known in India as Covishield and a domestic product, Covaxin developed by Bharat Biotech.

Value of the Month
Optimism
Hopefulness and Confidence about the future or the success of something

Notes

SMALLPOX

Smallpox is an eradicated virus that used to be contagious, disfiguring and often deadly.

The smallpox vaccine, introduced by Edward Jenner in 1796, was the first successful vaccine to be developed. He observed that milkmaids who previously had caught cowpox did not catch smallpox and showed that inoculated vaccinia protected against inoculated Variola virus.

FDA licensed smallpox (Vaccinia) Vaccine, Live with the proprietary name ACAM 2000. The smallpox vaccine is no longer available to the public. In 1980, WHO declared smallpox was eliminated.

Value of the Month
Perseverance
Continued effort and determination

Notes

YELLOW FEVER

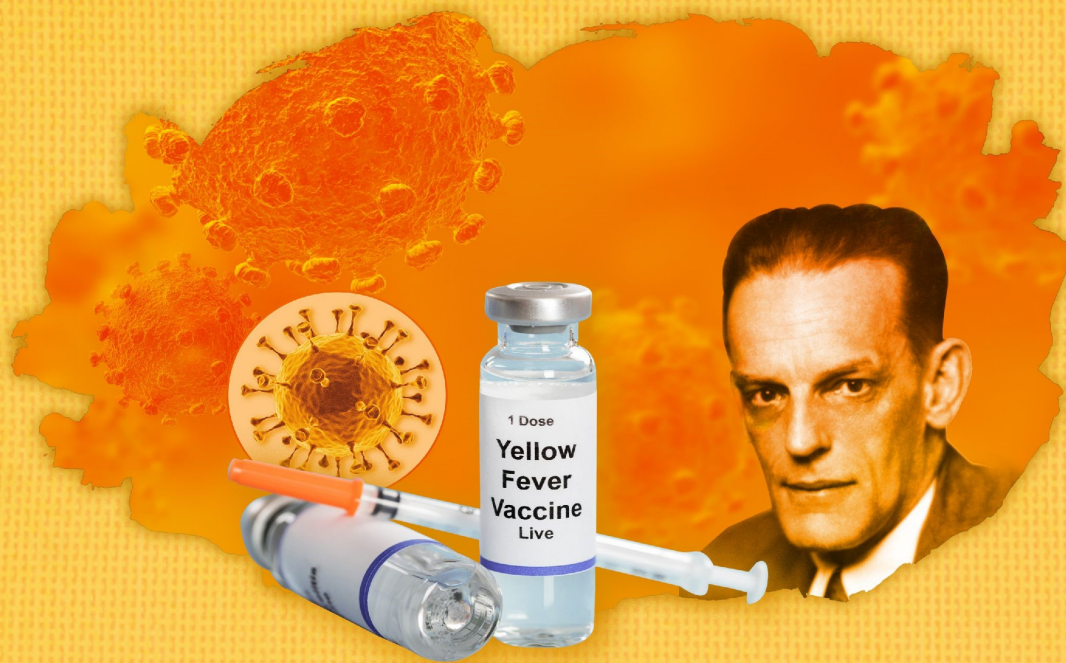

Yellow fever is a serious disease caused by a virus that is spread through the bite of an infected mosquito.

In 1951, **Max Theiler** of the **Rockefeller Foundation** received the Nobel Prize in Medicine for the discovery of an effective vaccine against yellow fever. This was the first and so far the only, Nobel Prize given for the development of a virus vaccine.

This is given as a single shot. One dose provides life long protection for most people.

Value of the Month *Integrity*

The quality of being honest and having strong moral principles

Notes

HUMAN PAPILLOMA

HPV vaccines prevent infection by certain types of Human Papilloma Virus (HPV). All vaccines protect against atleast HPV types 16 and 18, which cause the greatest risk of cervical cancer.

The vaccine was first developed at the University of Queensland, Georgetown University Medical Center, University of Rochester and the US National Cancer Institute. Researchers Ian Frazer and Jian Zhou at the University of Queensland have been accorded priority under US patent law for the invention of HPV Vaccine's basis. In 2006 the FDA approved the first preventive HPV Vaccine.

Value of the Month *Resilience*

The capacity to recover quickly from difficulties.

CHICKENPOX

Chickenpox is a highly contagious viral infection which causes an itchy, blister like rash on the skin. It is caused by Varicella Zoster Virus. A live, attenuated varicella vaccine was developed in Japan in the 1970's from virus isolated by Michiaki Takahashi from vesicular fluid from an otherwise healthy child with varicella disease. Varicella vaccine was licensed for general use in Japan and Korea in 1988, and in the United States in 1995 for persons age 12 months or older.

Notes

HEPATITIS

HEPATITIS refers to an inflammatory condition of the liver. In 1973, Dr. Wolfgang Szmusness, a Polish/Jewish emigre from the Soviet Union collaborated with Dr. Saul Krugman of New York University to develop a vaccine. The vaccine was approved in 1981. In 1986, research began on second generation of vaccines that do not use human serum, and the first vaccine was discontinued in 1990.

Hepatitis A vaccine history started with its development in 1995, which resulted in a decline in this virus occurrence after a peak number of cases in 1995. Two types of hepatitis A vaccines are available- the inactivated and the live attenuated vaccine. Hepatitis B vaccination is a series of three vaccines typically completed over the first 6 months of childhood.

Value of the Month
Honesty
Fairness and straightforwardness of conduct.

Notes

MMR

MMR vaccine is used against measles, mumps and rubella. These are the viral infections spread through the air by respiratory droplets. The first dose is generally given to children around 9 months to 15 months of age, with a second dose at 15 months to 6 years of age with atleast four weeks between the doses.

It was developed by Maurice Hilleman. It was licensed for use in USA by Merck in 1971. Stand alone measles, mumps and rubella vaccines had been previously licensed in 1963, 1967 and 1969 respectively.

Value of the Month *Respect*

Courteous regard for people's feelings.

RABIES

Rabies is a deadly virus belonging to Lyssavirus genus which spreads from the saliva of infected animals.

Two french scientists, **Louis Pasteur** and **Emile Roux**, developed the first rabies vaccination in 1885. Nine year old Joseph Meister (1876-1940), who had been mauled by a rabid dog, was the first human to receive this vaccine.

The rabies vaccine can be used to prevent rabies before and for a period of time after, exposure to the rabies virus.

HAEMOPHILUS INFLUENZAE

Haemophilus influenzae most often cause pneumonia, but can also cause severe illnesses like meningitis, bloodstream infections, Epiglottitis, Arthritis and Ear infections.

The first vaccine against Hib disease was licensed in the United States in 1985.

American Scientists John Robbins, MD and Rachel Schneerson, MD led to the first conjugate vaccine against Hib disease being licensed in the US (1987). Conjugate Vaccines are better able to induce an immune response.

Hib vaccine is very effective and routinely given throughout the US.

DPT

Diphtheria, Pertussis, Tetanus are all diseases caused by bacteria. All three can cause severe illness and death.

The first vaccine against pertussis was developed in 1930s by pediatrician Leila Denmark.

DTP Vaccine or DTP vaccine is a class of combination vaccines against three infectious disease in humans: diphtheria, pertussis (whooping cough) and tetanus. The vaccine components include diphtheria and tetanus toxoids.

Notes

POLIO

Polio is a disabling and life-threatening disease caused by the poliovirus. In 1955, Dr. Jonas Salk developed the first vaccine against polio-an injectable, inactivated polio vaccine. In 1961, Dr. Albert Sabin developed a "live" Oral Polio Vaccine (OPV) which rapidly became the vaccine of choice for most national immunization programmes globally. Only IPV has been used in the United States since 2000. Oral Poliovirus vaccine is still used throughout the world.

Value of the Month *Compassion*

Sympathetic concern for the sufferings or misfortunes of others.

Notes

PNEUMOCOCCAL

Pneumococcal disease is common in young children but older adults are at greatest risk of serious illness and death. In US, there are 2 kinds of vaccines: Pneumococcal conjugate vaccine (PCV13), Pneumococcal polysaccharide vaccine (PPSV23).

Merck licensed a polysaccharide vaccine protecting against 14 types of pneumococcal bacteria in 1977. In 1983, Merck expanded on this work by producing a vaccine against 23 types of pneumococcal bacteria.

This vaccine protects against serious and potentially fatal pneumococcal infections.

Views on Vedas

ओ३म्

By Eminent Scholars

वेदोऽखिलो धर्ममूलम्
- वैवस्वत मनु
वेद समस्त धर्म का मूल है।

वेद सब सत्य विद्याओं
का पुस्तक है।
- महर्षि दयानंद सरस्वती

Everything worth knowing,
even the most recent inventions
of Modern Science
were alluded to in the Vedas
- Prof. Max Müller

वेदा मे परमं चक्षुः
वेदा मे परमं बलम्
वेदा मे परमं धामः
वेदा मे ब्रह्मचोत्तमम्
- महर्षि वेदव्यास

वेदों की ऋचाओं में एक ही
परम देव की अनेक
नामों द्वारा स्तुति है।
- महर्षि अरविन्द

The Vedic Tradition attributes
to the vast reservoir of
the wisdom
- Prof. Maeterlinck

बुदधिपूर्वा वाक्यकृतिर्वेदे
- कणाद मुनि
मानवीय बुद्धि के उदय से
भी पूर्व हुई वाक्यात्मक रचना
'वेद' है।

ईश्वरीय ज्ञान की
अभिव्यक्ति 'वेद' भी ईश्वर की
भाँति शाश्वत व ज्ञानयुक्त है।
- स्वामी विवेकानंद

Vedas are the most remarkable
work containing not only
religious ideas for a perfect life
but also facts which all the
science has since proved true.
- Ella Wheeler Wilcox
